Cara Memasang Animasi Loading Di Wordpress

4 Januari 2019 Oleh infomenarik.site

animasi loading sangatlah penting untuk dipasang di website wordpress yang memiliki loading lambat. Dengan terpasangnya animasi loading di wordpress akan membuat pengunjung tidak merasa cepat bosan / bersabar untuk menunggu loading wordpress anda yang lambat, yang pastinya mengoptimalkan skor bounce rate. Nah, diartikel ini admin akan memberikan ulasan tentang bagaimana caranya memasang animasi loading di ... [Baca Selengkapnya](#)

Tutorial, Wordpress
Animasi loading

! Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 3 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Optimize CSS Delivery](#) of the following:

- https://infomenarik.site/wp-content/cache/autooptimize/css/autooptimize_18fe7dc951fde5d1f8d9305bcab2b003.css
- <https://fonts.googleapis.com/css?family=Lato:100,100italic,300,300italic,regular,italic,700,700italic,900,900italic>
- <https://infomenarik.site/wp-includes/css/dashicons.min.css?ver=5.0.2>

Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- <https://www.googletagmanager.com/gtag/js?id=UA-131435958-1> (15 minutes)
- <https://www.google-analytics.com/plugins/ua/linkid.js> (60 minutes)
- <https://www.google-analytics.com/analytics.js> (2 hours)

Reduce server response time

In our test, your server responded in 0.21 seconds.

There are many factors that can slow down your server response time. [Please read our recommendations](#) to learn how you can monitor and measure where your server is spending the most time.

7 Passed Rules

Avoid landing page redirects

Your page has no redirects. Learn more about [avoiding landing page redirects](#).

Enable compression

Mobile

You have compression enabled. Learn more about [enabling compression](#).

Minify CSS

Your CSS is minified. Learn more about [minifying CSS](#).

Minify HTML

Your HTML is minified. Learn more about [minifying HTML](#).

Minify JavaScript

Your JavaScript content is minified. Learn more about [minifying JavaScript](#).

Optimize images

Your images are optimized. Learn more about [optimizing images](#).

Prioritize visible content

You have the above-the-fold content properly prioritized. Learn more about [prioritizing visible content](#).

97 / 100 User Experience

 Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

Mobile

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target `Tutorial` and 30 others are close to other tap targets final.
- The tap target `8` is close to 1 other tap targets.

4 Passed Rules

Avoid plugins

Your page does not appear to use plugins, which would prevent content from being usable on many platforms. Learn more about the importance of [avoiding plugins](#).

Configure the viewport

Your page specifies a viewport matching the device's size, which allows it to render properly on all devices. Learn more about [configuring viewports](#).

Size content to viewport

The contents of your page fit within the viewport. Learn more about [sizing content to the viewport](#).

Use legible font sizes

The text on your page is legible. Learn more about [using legible font sizes](#).
